Preface

This publication presents a complete historical record of the production of coins by United States Mint institutions from 1793 through December 31, 1970.

Domestic coinage is reported by United States Mint, class, denomination, and year of manufacture. Concluding tables show total coins manufactured by year and by class (gold, silver, minor, or clad).

The manufacture of foreign coinage by United States mints for other governments began in 1876. The second section of this compilation traces this production by country from 1876 through December 31, 1970.

This historical sequence is concluded with Legislative Exhibits, which contain the major U.S. coinage legislation from the act of April 2, 1792, through the act of December 31, 1970.

Mary Brooks,
Director of the Mint

¹ The average silver content is 40 percent of the standard gross weight, or 4.6 grams of silver.² The design of a U.S. coin may not be changed more frequently than once in 25 years, except by act of Congress.³ The change prior to 25 years to George Washington design was authorized by the act of Mar. 4, 1931, in honor of the 200th anniversary of his birth.⁴ The Abraham Lincoln 1-cent piece with wheat wreath design on the reverse was coined from June 1909 through Dec. 1958.

Foreign Coinage by U.S. Mints 1876-1970

Introduction

The mints of the United States were first authorized to manufacture coins for foreign governments in 1874.¹

The first foreign coinage order was executed for the Government of Venezuela during the fiscal year ending June 30, 1876.

Through December 31, 1970, U.S. mints at Philadelphia, Pa., San Francisco, Calif., New Orleans, La., and Denver, Colo., had produced 8,520,241,899 coins for 41 foreign countries.

Explanatory notes

In some instances, before 1906, production figures were recorded on a U.S. Government fiscal year basis (July 1 one year through June 30 the following year). Two calendar years combined in the date column of a table indicate that production occurred between July 1 and June 30 of the years stated. The dates appearing on coins may or may not coincide with the production year.

Metallic composition.—The proportions of metals are expressed either in percentages (symbol %) with the proportions adding to 100 percent; or, for gold and silver coins, in thousands with the proportions of precious metal and base metal adding to 1,000 parts.

Gross weight.—This refers to the overall weight of one coin of the specified denomination.

Conversion factors.—Original weight units specified in grains have been converted to grams and diameters specified in inches converted to millimeters. The following conversion factors were used:

Weight units
1 grain=0.0647989182 gram.

Measurement units
1 millimeter=0.03937 inch.

Symbols used in tables.—
